July 2009

**Foreword by William Shepherd**<sup>1</sup>

Saturday 2nd August 2008

For the past few years I have been warning colleagues on *The Left* to be careful about the positions they take on climate change and global warming.

**I take the view that bigger games are in play and that the *Carbon Dioxide Hypothesis* is part of an orchestrated (and to date a very successful) attempt to blindside the left and divert them away from challenging the shift from *Financial Capitalism* via *Disaster Capitalism*...see Naomi Klein's [\*The Shock Doctrine\*](#)...to *Resource Capitalism* where resources are controlled directly (seed, soil, water, energy etc) instead of through central banking and financial intermediaries.**

**The real point of the *Carbon Dioxide Hypothesis* is to set up trading exchanges to manipulate and control the ownership and distribution of resources. There are then secondary benefits such as getting the public purse to pick up the tab for the conversion of the global transport fleet from oil to hydrogen grids, nuclear power etc. but control of the *Resource Exchanges* is the main purpose.**

My approach to climate change has been to explore the science behind the headlines. The fifty posts on my climate blog is one measure of the complexity of the issues. But I hope that my honesty at least is infectious. My blog statistics show that last month the *Shepherd on Climate*<sup>2</sup> blog received 1932 page views and 856 visitors, while several dozen copies a day of my 2006 pamphlet *England's Climate & Energy Politics*<sup>3</sup> were downloaded in response to requests to my webserver from around the globe.

It may be that many of these went to *Right Wingers*. We like to have our prejudices confirmed and find ourselves easily coming to the right conclusions for the wrong reasons. However my own position is about as far to the left as you can get. I don't like ordinary people being bossed around (and necessarily slaughtered) by rich, wealthy unaccountable elites and I don't want to see a *One World Government* imposed on my grandchildren...my first was born earlier this week and is likely to be alive in 2108.

The sun showers enough energy on the Earth in forty-five minutes to meet the planet's need for a year. No elite, however powerful, can alter this reality. They can hide the fact. They can obstruct honest attempts to exploit its implications. But not for ever. It would be smarter for them to change tack sooner rather than later.

**The grid-pipeline demolition job I am recommending is not one I would give to the energy companies and the pipeline operators. They have strong vested interests in doing the exact opposite, namely monopolising the energy flows and creating artificial energy scarcities.**

I hope this helps you understand my concerns for the way science is being misused to support ideologically driven claims. The notion that carbon dioxide emissions cause climate change is at best a correlation and not a cause; and at worst represents the fraudulent misrepresentation of scientific data ...e.g. the medieval warming period...and the unscientific dismissal of alternative explanations of data.

My underlying scientific attitude is one of scepticism to theory and forecasts while respectful of reliable evidence and good data. I expect to find more and more people moving in this direction as *Good Science*<sup>4</sup>...the method rather than the scientist...homes in on the truth.

Indeed, audaciously, I dare to hope that by the mid 2030s most of the energy and electricity grids and pipelines that lace our world with a network of vulnerable terrorist targets will have been shut down and dismantled. They are unjustifiable by either economics or energy fundamentals.

So I see our immediate task as one of damage limitation and education. The risk is that the *Onward & Upward Brigade* will provoke the very crisis their spin doctors assure us are the target of their laws and treaties. When data is ambivalent and theories are unproven true statesmen counsel caution. Castles are better built on firm foundations than on shifting sands. Slow and small are beautiful.

Figure: Carbon Prices 2007 -2009

**Introduction by William Shepherd**<sup>5</sup>

Monday 11th August 2008

In the beginning, the *Environmental Movement* insisted that no one should dump anything into the atmosphere or into the oceans, nor bury obnoxious substances underground or leave them trashing up the planet. From this came the *Polluter Pays Principle*.

They should also have insisted on the *Closed System Principle* backed up by binding treaties and financial penalties imposed on those responsible for industrial and distribution pollution and man-created environmental pollution (e.g. cities). They should have been compelled to take in their own rubbish at their own expense.

But instead, *The Right* diverted *The Left* and *The Greens* into the weeds by packing them off (all expenses paid) to exotic places to chat at pointless summits (Johannesburg) about meaningless treaties (Kyoto). Environmentalists have said to me that even if I don't accept the impact of carbon dioxide on our future climate, all the other arguments hold true, and are reason enough to legislate limits on carbon production and emissions for individuals, communities and corporations.

I am not sure I agree, so for several years I have been warning *The Left* not to jump aboard the climate bandwagon but to read the science instead of relying on the spin. I am what the *German Green Party* once called a *Fundi* and, like most *Fundis*, I believe that in the long run *Fundis* are *Realos*.

The practice of the past 500 years has been to permit the owners of private property...and in particular judicial persons who should never have been given equality before the law with real persons in the first place...to enclose and trash the commons and to steal the personal possessions of real people. Passing on private costs to the personal and the public purse is wrong. It is time to make it unprofitable too. This means laws, courts, fines, bailiffs and prisons.

**The invention of the *Global Warming Scare* with *Carbon Dioxide Emissions* as its cause has enabled *The Right* to drastically limit the application of the *Polluter Pays* and the *Closed System* principles to a tiny percentage of the pollution they are responsible for.**

**Duping environmentalists to go along with *Carbon Emissions Exchanges*...with many more exotic exchanges to follow...legitimises the practise and ensures that the public purse picks up the tab for even this relatively minor clean-up operation. The world has been steadily moving from carbon to hydrogen as its source of piped energy for decades and recent increases in oil and gas prices will accelerate the trend.**

The impact of the H<sub>2</sub>O (water), NO<sub>2</sub> (nitrous oxide) and CH<sub>4</sub> (methane) molecules in the atmosphere overwhelms any global warming effect of the CO<sub>2</sub> (carbon dioxide) molecule. But more importantly, one of the lessons of history is that doing the right thing for the wrong reasons is usually a mistake.

Getting things done that need to be done by using unproven facts and partial theories about greenhouse gases and climate change is a tactical error. The road to hell is paved with good intentions and is trod by those who put their trust in faith and not facts.

Computer forecasts are not facts and complex systems have an uncanny way of producing counter-intuitive behaviour and unanticipated consequences. Meddling without understanding is a recipe for disaster.

<sup>5</sup> First published on 11<sup>th</sup> August 2008 as *Letter to David* at <http://climate.blog.co.uk/2009/03/31/second-letter-to-ella-5864384/>

***The Left* has been fooled by the *Climate Scare* into allowing extension into the *Real Economy* of the application of market mechanisms and exchange manipulations, which had previously been limited to the *Financial Economy*.**

**The techniques of the *Commodity Exchanges* in London, New York and Chicago are being rapidly expanded until, the *Exchange Masters* can, at a whim, throttle the lifeblood out of the worldwide supply and distribution system delivered by the globalisation of the latter part of the 20th century.**

Until now, apart from the froth and exuberance of futures contracts, these exchanges have served a useful purpose in hedging against volatility in supply and demand, and smoothing fluctuations in the prices of real commodities that readily lend themselves to such manipulations...the overground metal mines, air- and container-ship freightable plantation produce and the like.

But now these market practices...cornering, insider trading, speculation, gambling etc...are being invoked in the trading of ever more exotic commodities like electricity and pollution with the practices institutionalised to create structural monopolies that are impossible to dismantle and easy to meter and manipulate. Pollutants like sulphur dioxide should not be allowed into the atmosphere in the first place.

Electricity grids, gas pipelines and wind farms are the wrong answers for a planet which receives enough energy from the sun in 45-minutes to meet its needs for a year. We are on a slippery slope.

***The Right* is intent on transforming *Financial Capitalism* into *Resource Capitalism*. And it will use the *Disaster Capitalism* described by Naomi Klein in *The Shock Doctrine* to force us through the transition. The end result will be global genocide on an unparalleled scale. Susan George has described how the global operation will be carried out in *The Lugano Report*. When written, this was fiction. It is rapidly becoming reality.**

To add insult to the coming massacre, the elitists and their global conglomerates are getting paid for their ethnic cleansing of the planet. Just as bankers create money out of nothing so these *Exchange Masters* receive their licences to pollute for nothing to sell on to the *Real Economy* for windfall profits.

Energy Companies get their carbon credits for free...or they have until now. One tiny light at the end of the tunnel is that someone in Whitehall has finally woken up and is pushing the idea of auctioning off the carbon credits as if they were bandwidth for mobile phones.

*The Left* is being taken for a ride by the *One World Government* conspirators. These men in suits are not nice guys and it's time *The Left* started playing hardball again. Instead they are letting themselves be outgunned and outmanoeuvred.

It's time to wise up and figure out how to get even.

Getting mad is a pretty good way to start.

**The Great American Bubble Machine by Matt Taibbi**<http://cryptogon.com/?p=9603>first published in [Rolling Stone](#) on 1<sup>st</sup> July 2009

*From tech stocks to high gas prices, Goldman Sachs has engineered every major market manipulation since the Great Depression - and they're about to do it again*

The first thing you need to know about Goldman Sachs is that it's everywhere. The world's most powerful investment bank is a great vampire squid wrapped around the face of humanity, relentlessly jamming its blood funnel into anything that smells like money. In fact, the history of the recent financial crisis, which doubles as a history of the rapid decline and fall of the suddenly swindled-dry American empire, reads like a Who's Who of Goldman Sachs graduates.

By now, most of us know the major players. As George Bush's last Treasury secretary, former Goldman CEO Henry Paulson was the architect of the bailout, a suspiciously self-serving plan to funnel trillions of Your Dollars to a handful of his old friends on Wall Street. Robert Rubin, Bill Clinton's former Treasury secretary, spent 26 years at Goldman before becoming chairman of Citigroup - which in turn got a \$300 billion taxpayer bailout from Paulson. There's John Thain, the rear end in a top hat chief of Merrill Lynch who bought an \$87,000 area rug for his office as his company was imploding; a former Goldman banker, Thain enjoyed a multibillion-dollar handout from Paulson, who used billions in taxpayer funds to help Bank of America rescue Thain's sorry company. And Robert Steel, the former Goldmanite head of Wachovia, scored himself and his fellow executives \$225 million in golden parachute payments as his bank was self-destructing. There's Joshua Bolten, Bush's chief of staff during the bailout, and Mark Patterson, the current Treasury chief of staff, who was a Goldman lobbyist just a year ago, and Ed Liddy, the former Goldman director whom Paulson put in charge of bailed-out insurance giant AIG, which forked over \$13 billion to Goldman after Liddy came on board. The heads of the Canadian and Italian national banks are Goldman alums, as is the head of the World Bank, the head of the New York Stock Exchange, the last two heads of the Federal Reserve Bank of New York - which, incidentally, is now in charge of overseeing Goldman - not to mention ...

But then, any attempt to construct a narrative around all the former Goldmanites in influential positions quickly becomes an absurd and pointless exercise, like trying to make a list of everything. What you need to know is the big picture: If America is circling the drain, Goldman Sachs has found a way to be that drain - an extremely unfortunate loophole in the system of Western democratic capitalism, which never foresaw that in a society governed passively by free markets and free elections, organized greed always defeats disorganized democracy.

The bank's unprecedented reach and power have enabled it to turn all of America into a giant pump-and-dump scam, manipulating whole economic sectors for years at a time, moving the dice game as this or that market collapses, and all the time gorging itself on the unseen costs that are breaking families everywhere - high gas prices, rising consumer-credit rates, half-eaten pension funds, mass layoffs, future taxes to pay off bailouts. All that money that you're losing, it's going somewhere, and in both a literal and a figurative sense, Goldman Sachs is where it's going: The bank is a huge, highly sophisticated engine for converting the useful, deployed wealth of society into the least useful, most wasteful and insoluble substance on Earth - pure profit for rich individuals.

They achieve this using the same playbook over and over again. The formula is relatively simple: Goldman positions itself in the middle of a speculative bubble, selling investments they know are crap. Then they Hoover up vast sums from the middle and lower floors of society with the aid of a crippled and corrupt state that allows it to rewrite the rules in exchange for the relative pennies the bank throws at political patronage. Finally, when it all goes bust, leaving millions of ordinary citizens broke and starving, they begin the entire process over again, riding in to rescue us all by lending us back our own money at interest, selling themselves as men above greed, just a bunch of really smart guys keeping the wheels greased. They've been pulling this same stunt over and over since the 1920s - and now they're preparing to do it again, creating what may be the biggest and most audacious bubble yet.

If you want to understand how we got into this financial crisis, you have to first understand where all the money went - and in order to understand that, you need to understand what Goldman has already gotten away with. It is a history exactly five bubbles long - including last year's strange and seemingly inexplicable spike in the price of oil. There were a lot of losers in each of those bubbles, and in the bailout that followed. But Goldman wasn't one of them.

**If America Is Now Circling The Drain, Goldman Sachs Has Found A Way To Be That Drain.****Bubble #1 - The Great Depression**

Goldman wasn't always a too-big-to-fail Wall Street behemoth, the ruthless face of kill-or-be-killed capitalism on steroids - just almost always. The bank was actually founded in 1869 by a German immigrant named Marcus Goldman, who built it up with his son-in-law Samuel Sachs. They were pioneers in the use of commercial paper, which is just a fancy way of saying they made money lending out short-term IOUs to small-time vendors in downtown Manhattan.

You can probably guess the basic plotline of Goldman's first 100 years in business: plucky, immigrant-led investment bank beats the odds, pulls itself up by its bootstraps, makes shitloads of money. In that ancient history there's really only one episode that bears scrutiny now, in light of more recent events: Goldman's disastrous foray into the speculative mania of pre-crash Wall Street in the late 1920s.

This great Hindenburg of financial history has a few features that might sound familiar. Back then, the main financial tool used to bilk investors was called an "investment trust." Similar to modern mutual funds, the trusts took the cash of investors large and small and (theoretically, at least) invested it in a smorgasbord of Wall Street securities, though the securities and amounts were often kept hidden from the public. So a regular guy could invest \$10 or \$100 in a trust and feel like he was a big player. Much as in the 1990s, when new vehicles like day trading and e-trading attracted reams of new suckers from the sticks who wanted to feel like big shots, investment trusts roped a new generation of regular-guy investors into the speculation game.

Beginning a pattern that would repeat itself over and over again, Goldman got into the investment-trust game late, then jumped in with both feet and went hog-wild. The first effort was the Goldman Sachs Trading Corporation; the bank issued a million shares at \$100 apiece, bought all those shares with its own money and then sold 90 percent of them to the hungry public at \$104. The trading corporation then relentlessly bought shares in itself, bidding the price up further and further. Eventually it dumped part of its holdings and sponsored a new trust, the Shenandoah Corporation, issuing millions more in shares in that fund - which in turn sponsored yet another trust called the Blue Ridge Corporation. In this way, each investment trust served as a front for an endless investment pyramid: Goldman hiding behind Goldman hiding behind Goldman. Of the 7,250,000 initial shares of Blue Ridge, 6,250,000 were actually owned by Shenandoah - which, of course, was in large part owned by Goldman Trading.

The end result (ask yourself if this sounds familiar) was a daisy chain of borrowed money, one exquisitely vulnerable to a decline in performance anywhere along the line; The basic idea isn't hard to follow. You take a dollar and borrow nine against it; then you take that \$10 fund and borrow \$90; then you take your \$100 fund and, so long as the public is still lending, borrow and invest \$900. If the last fund in the line starts to lose value, you no longer have the money to pay back your investors, and everyone gets massacred.

In a chapter from *The Great Crash, 1929* titled "In Goldman Sachs We Trust," the famed economist John Kenneth Galbraith held up the Blue Ridge and Shenandoah trusts as classic examples of the insanity of leverage-based investment. The trusts, he wrote, were a major cause of the market's historic crash; in today's dollars, the losses the bank suffered totaled \$475 billion. "It is difficult not to marvel at the imagination which was implicit in this gargantuan insanity," Galbraith observed, sounding like Keith Olbermann in an ascot. "If there must be madness, something may be said for having it on a heroic scale."

## **Bubble #2 - Tech Stocks**

Fast-Forward about 65 years. Goldman not only survived the crash that wiped out so many of the investors it duped, it went on to become the chief underwriter to the country's wealthiest and most powerful corporations. Thanks to Sidney Weinberg, who rose from the rank of janitor's assistant to head the firm, Goldman became the pioneer of the initial public offering, one of the principal and most lucrative means by which companies raise money. During the 1970s and 1980s, Goldman may not have been the planet-eating Death Star of political influence it is today, but it was a top-drawer firm that had a reputation for attracting the very smartest talent on the Street.

It also, oddly enough, had a reputation for relatively solid ethics and a patient approach to investment that shunned the fast buck; its executives were trained to adopt the firm's mantra, "long-term greedy." One former Goldman banker who left the firm in the early Nineties recalls seeing his superiors give up a very profitable deal on the grounds that it was a long-term loser. "We gave back money to 'grownup' corporate clients who had made bad deals with us," he says. "Everything we did was legal and fair - but 'long-term greedy' said we didn't want to make such a profit at the clients' collective expense that we spoiled the marketplace."

But then, something happened. It's hard to say what it was exactly; it might have been the fact that Goldman's co-chairman in the early Nineties, Robert Rubin, followed Bill Clinton to the White House, where he directed the National Economic Council and eventually became Treasury Secretary. While the American media fell in love with the story line of a pair of baby-boomer, Sixties-child, Fleetwood Mac yuppies nesting in the White House, it also nursed an undisguised crush on Rubin, who was hyped as without a doubt the smartest person ever to walk the face of the Earth, with Newton, Einstein, Mozart and Kant running far behind.

Rubin was the prototypical Goldman banker. He was probably born in a \$4,000 suit, he had a face that seemed permanently frozen just short of an apology for being so much smarter than you, and he exuded a Spock-like, emotion-neutral exterior; the only human feeling you could imagine him experiencing was a nightmare about being forced to fly coach. It became almost a national cliché that whatever Rubin thought was best for the economy - a phenomenon that reached its apex in 1999, when Rubin appeared on the cover of *Time* with his Treasury deputy, Larry Summers, and Fed chief Alan Greenspan under the headline *The Committee to Save the World*. And "what

Rubin thought,” mostly, was that the American economy, and in particular the financial markets, were over-regulated and needed to be set free. During his tenure at Treasury, the Clinton White House made a series of moves that would have drastic consequences for the global economy - beginning with Rubin’s complete and total failure to regulate his old firm during its first mad dash for obscene short-term profits.

The basic scam in the *Internet Age* is pretty easy even for the financially illiterate to grasp. Companies that weren’t much more than pot-fueled ideas scrawled on napkins by up-too-late bong-smokers were taken public via IPOs, hyped in the media and sold to the public for megamillions. It was as if banks like Goldman were wrapping ribbons around watermelons, tossing them out 50-story windows and opening the phones for bids. In this game you were a winner only if you took your money out before the melon hit the pavement.

It sounds obvious now, but what the average investor didn’t know at the time was that the banks had changed the rules of the game, making the deals look better than they actually were. They did this by setting up what was, in reality, a two-tiered investment system - one for the insiders who knew the real numbers, and another for the lay investor who was invited to chase soaring prices the banks themselves knew were irrational. While Goldman’s later pattern would be to capitalize on changes in the regulatory environment, its key innovation in the Internet years was to abandon its own industry’s standards of quality control.

“Since the Depression, there were strict underwriting guidelines that Wall Street adhered to when taking a company public,” says one prominent hedge-fund manager. “The company had to be in business for a minimum of five years, and it had to show profitability for three consecutive years. But Wall Street took these guidelines and threw them in the trash.” Goldman completed the snow job by pumping up the sham stocks: “Their analysts were out there saying Bullshit.com is worth \$100 a share.”

The problem was, nobody told investors that the rules had changed. “Everyone on the inside knew,” the manager says. “Bob Rubin sure as hell knew what the underwriting standards were. They’d been intact since the 1930s.”

Jay Ritter, a professor of finance at the University of Florida who specializes in IPOs, says banks like Goldman knew full well that many of the public offerings they were touting would never make a dime. “In the early Eighties, the major underwriters insisted on three years of profitability. Then it was one year, then it was a quarter. By the time of the Internet bubble, they were not even requiring profitability in the foreseeable future.”

Goldman has denied that it changed its underwriting standards during the Internet years, but its own statistics belie the claim. Just as it did with the investment trust in the 1920s, Goldman started slow and finished crazy in the Internet years. After it took a little-known company with weak financials called Yahoo! public in 1996, once the tech boom had already begun, Goldman quickly became the IPO king of the Internet era. Of the 24 companies it took public in 1997, a third were losing money at the time of the IPO. In 1999, at the height of the boom, it took 47 companies public, including stillborns like Webvan and eToys, investment offerings that were in many ways the modern equivalents of Blue Ridge and Shenandoah. The following year, it underwrote 18 companies in the first four months, 14 of which were money losers at the time. As a leading underwriter of Internet stocks during the boom, Goldman provided profits far more volatile than those of its competitors: In 1999, the average Goldman IPO leapt 281 percent above its offering price, compared to the Wall Street average of 181 percent.

How did Goldman achieve such extraordinary results? One answer is that they used a practice called “laddering,” which is just a fancy way of saying they manipulated the share price of new offerings. Here’s how it works: Say you’re Goldman Sachs, and Bullshit.com comes to you and asks you to take their company public. You agree on the usual terms: You’ll price the stock, determine how many shares should be released and take the Bullshit.com CEO on a “road show” to schmooze investors, all in exchange for a substantial fee (typically six to seven percent of the amount raised). You then promise your best clients the right to buy big chunks of the IPO at the low offering price - let’s say Bullshit.com’s starting share price is \$15 - in exchange for a promise that they will buy more shares later on the open market. That seemingly simple demand gives you inside knowledge of the IPO’s future, knowledge that wasn’t disclosed to the day-trader schmucks who only had the prospectus to go by: You know that certain of your clients who bought X amount of shares at \$15 are also going to buy Y more shares at \$20 or \$25, virtually guaranteeing that the price is going to go to \$25 and beyond. In this way, Goldman could artificially jack up the new company’s price, which of course was to the bank’s benefit - a six percent fee of a \$500 million IPO is serious money.

Goldman was repeatedly sued by shareholders for engaging in laddering in a variety of Internet IPOs, including Webvan and NetZero. The deceptive practices also caught the attention of Nichol as Maier, the syndicate manager of Cramer & Co., the hedge fund run at the time by the now-famous chattering television rear end in a top hat Jim Cramer, himself a Goldman alum. Maier told the SEC that while working for Cramer between 1996 and 1998, he was repeatedly forced to engage in laddering practices during IPO deals with Goldman.

“Goldman, from what I witnessed, they were the worst perpetrator,” Maier said. “They totally fueled the bubble. And it’s specifically that kind of behavior that has caused the market crash. They built these stocks upon an illegal

foundation - manipulated up - and ultimately, it really was the small person who ended up buying in." In 2005, Goldman agreed to pay \$40 million for its laddering violations - a puny penalty relative to the enormous profits it made. (Goldman, which has denied wrongdoing in all of the cases it has settled, refused to respond to questions for this story.)

Another practice Goldman engaged in during the Internet boom was "spinning," better known as bribery. Here the investment bank would offer the executives of the newly public company shares at extra-low prices, in exchange for future underwriting business. Banks that engaged in spinning would then undervalue the initial offering price - ensuring that those "hot" opening price shares it had handed out to insiders would be more likely to rise quickly, supplying bigger first-day rewards for the chosen few. So instead of Bullshit.com opening at \$20, the bank would approach the Bullshit.com CEO and offer him a million shares of his own company at \$18 in exchange for future business - effectively robbing all of Bullshit's new shareholders by diverting cash that should have gone to the company's bottom line into the private bank account of the company's CEO.

In one case, Goldman allegedly gave a multimillion-dollar special offering to eBay CEO Meg Whitman, who later joined Goldman's board, in exchange for future i-banking business. According to a report by the House Financial Services Committee in 2002, Goldman gave special stock offerings to executives in 21 companies that it took public, including Yahoo! co-founder Jerry Yang and two of the great slithering villains of the financial-scandal age - Tyco's Dennis Kozlowski and Enron's Ken Lay. Goldman angrily denounced the report as "an egregious distortion of the facts" - shortly before paying \$110 million to settle an investigation into spinning and other manipulations launched by New York state regulators. "The spinning of hot IPO shares was not a harmless corporate perk," then-attorney general Eliot Spitzer said at the time. "Instead, it was an integral part of a fraudulent scheme to win new investment-banking business."

Such practices conspired to turn the Internet bubble into one of the greatest financial disasters in world history: Some \$5 trillion of wealth was wiped out on the NASDAQ alone. But the real problem wasn't the money that was lost by shareholders, it was the money gained by investment bankers, who received hefty bonuses for tampering with the market. Instead of teaching Wall Street a lesson that bubbles always deflate, the Internet years demonstrated to bankers that in the age of freely flowing capital and publicly owned financial companies, bubbles are incredibly easy to inflate, and individual bonuses are actually bigger when the mania and the irrationality are greater.

### **Goldman Scammed Housing Investors By Betting Against Its Own Crappy Mortgages.**

Nowhere was this truer than at Goldman. Between 1999 and 2002, the firm paid out \$28.5 billion in compensation and benefits - an average of roughly \$350,000 a year per employee. Those numbers are important because the key legacy of the Internet boom is that the economy is now driven in large part by the pursuit of the enormous salaries and bonuses that such bubbles make possible. Goldman's mantra of "long-term greedy" vanished into thin air as the game became about getting your check before the melon hit the pavement.

The market was no longer a rationally managed place to grow real, profitable businesses: It was a huge ocean of Someone Else's Money where bankers hauled in vast sums through whatever means necessary and tried to convert that money into bonuses and payouts as quickly as possible. If you laddered and spun 50 Internet IPOs that went bust within a year, so what? By the time the *Securities and Exchange Commission* got around to fining your firm \$110 million, the yacht you bought with your IPO bonuses was already six years old. Besides, you were probably out of Goldman by then, running the *US Treasury* or maybe the state of New Jersey. (One of the truly comic moments in the history of America's recent financial collapse came when Gov. Jon Corzine of New Jersey, who ran Goldman from 1994 to 1999 and left with \$320 million in IPO-fattened stock, insisted in 2002 that "I've never even heard the term 'laddering' before.")

For a bank that paid out \$7 billion a year in salaries, \$110 million fines issued half a decade late were something far less than a deterrent - they were a joke. Once the Internet bubble burst, Goldman had no incentive to reassess its new, profit-driven strategy; it just searched around for another bubble to inflate. As it turns out, it had one ready, thanks in large part to Rubin.

### **Bubble #3 - The Housing Craze**

Goldman's role in the sweeping disaster that was the housing bubble is not hard to trace. Here again, the basic trick was a decline in underwriting standards, although in this case the standards weren't in IPOs but in mortgages. By now almost everyone knows that for decades mortgage dealers insisted that home buyers be able to produce a down payment of 10 percent or more, show a steady income and good credit rating, and possess a real first and last name. Then, at the dawn of the new millennium, they suddenly threw all that poo poo out the window and started writing mortgages on the backs of napkins to cocktail waitresses and ex-cons carrying five bucks and a Snickers bar.

None of that would have been possible without investment bankers like Goldman, who created vehicles to package those lovely mortgages and sell them en masse to unsuspecting insurance companies and pension funds. This created a mass market for toxic debt that would never have existed before; in the old days, no bank would have wanted to keep some addict ex-con's mortgage on its books, knowing how likely it was to fail. You can't write these mortgages, in other words, unless you can sell them to someone who doesn't know what they are.

Goldman used two methods to hide the mess they were selling. First, they bundled hundreds of different mortgages into instruments called Collateralized Debt Obligations. Then they sold investors on the idea that, because a bunch of those mortgages would turn out to be OK, there was no reason to worry so much about the ugly ones: The CDO, as a whole, was sound. Thus, junk-rated mortgages were turned into AAA-rated investments. Second, to hedge its own bets, Goldman got companies like AIG to provide insurance - known as credit-default swaps - on the CDOs. The swaps were essentially a racetrack bet between AIG and Goldman: Goldman is betting the ex-cons will default, AIG is betting they won't.

There was only one problem with the deals: All of the wheeling and dealing represented exactly the kind of dangerous speculation that federal regulators are supposed to rein in. Derivatives like CDOs and credit swaps had already caused a series of serious financial calamities: *Procter & Gamble* and *Gibson Greetings* both lost fortunes, and Orange County, California, was forced to default in 1994. A report that year by the *Government Accountability Office* recommended that such financial instruments be tightly regulated - and in 1998, the head of the *Commodity Futures Trading Commission*, a woman named Brooksley Born, agreed. That May, she circulated a letter to business leaders and the Clinton administration suggesting that banks be required to provide greater disclosure in derivatives trades, and maintain reserves to cushion against losses.

More regulation wasn't exactly what Goldman had in mind. "The banks go crazy - they want it stopped," says Michael Greenberger, who worked for Born as director of trading and markets at the *CFTC* and is now a law professor at the *University of Maryland*. "Greenspan, Summers, Rubin and [SEC chief Arthur] Levitt want it stopped."

Clinton's reigning economic foursome - "especially Rubin," according to Greenberger - called Born in for a meeting and pleaded their case. She refused to back down, however, and continued to push for more regulation of the derivatives. Then, in June 1998, Rubin went public to denounce her move, eventually recommending that Congress strip the *CFTC* of its regulatory authority. In 2000, on its last day in session, Congress passed the now-notorious *Commodity Futures Modernization Act*, which had been inserted into an 11,000-page spending bill at the last minute, with almost no debate on the floor of the Senate. Banks were now free to trade default swaps with impunity.

But the story didn't end there. AIG, a major purveyor of default swaps, approached the *New York State Insurance Department* in 2000 and asked whether default swaps would be regulated as insurance. At the time, the office was run by one Neil Levin, a former Goldman vice president, who decided against regulating the swaps. Now freed to underwrite as many housing-based securities and buy as much credit-default protection as it wanted, Goldman went berserk with lending lust. By the peak of the housing boom in 2006, Goldman was underwriting \$76.5 billion worth of mortgage-backed securities - a third of which were subprime - much of it to institutional investors like pensions and insurance companies. And in these massive issues of real estate were vast swamps of crap.

Take one \$494 million issue that year, *GSAMP Trust 2006-S3*. Many of the mortgages belonged to second-mortgage borrowers, and the average equity they had in their homes was 0.71 percent. Moreover, 58 percent of the loans included little or no documentation - no names of the borrowers, no addresses of the homes, just zip codes. Yet both of the major ratings agencies, *Moody's* and *Standard & Poor's*, rated 93 percent of the issue as investment grade. *Moody's* projected that less than 10 percent of the loans would default. In reality, 18 percent of the mortgages were in default within 18 months.

Not that Goldman was personally at any risk. The bank might be taking all these hideous, completely irresponsible mortgages from beneath-gangster-status firms like *Countrywide* and selling them off to municipalities and pensioners - old people, for God's sake - pretending the whole time that it wasn't grade-D horseshit. But even as it was doing so, it was taking short positions in the same market, in essence betting against the same crap it was selling. Even worse, Goldman bragged about it in public. "The mortgage sector continues to be challenged," David Viniar, the bank's chief financial officer, boasted in 2007. "As a result, we took significant markdowns on our long inventory positions .... However, our risk bias in that market was to be short, and that net short position was profitable." In other words, the mortgages it was selling were for chumps. The real money was in betting against those same mortgages.

"That's how audacious these assholes are," says one hedge-fund manager. "At least with other banks, you could say that they were just dumb - they believed what they were selling, and it blew them up. Goldman knew what it was doing." I ask the manager how it could be that selling something to customers that you're actually betting against -

particularly when you know more about the weaknesses of those products than the customer - doesn't amount to securities fraud.

"It's exactly securities fraud," he says. "It's the heart of securities fraud."

Eventually, lots of aggrieved investors agreed. In a virtual repeat of the Internet IPO craze, Goldman was hit with a wave of lawsuits after the collapse of the housing bubble, many of which accused the bank of withholding pertinent information about the quality of the mortgages it issued. New York state regulators are suing Goldman and 25 other underwriters for selling bundles of crappy Countrywide mortgages to city and state pension funds, which lost as much as \$100 million in the investments. Massachusetts also investigated Goldman for similar misdeeds, acting on behalf of 714 mortgage holders who got stuck holding predatory loans. But once again, Goldman got off virtually scot-free, staving off prosecution by agreeing to pay a paltry \$60 million - about what the bank's CDO division made in a day and a half during the real estate boom.

The effects of the housing bubble are well known - it led more or less directly to the collapse of *Bear Stearns*, *Lehman Brothers* and *AIG*, whose toxic portfolio of credit swaps was in significant part composed of the insurance that banks like Goldman bought against their own housing portfolios. In fact, at least \$13 billion of the taxpayer money given to *AIG* in the bailout ultimately went to Goldman, meaning that the bank made out on the housing bubble twice: It hosed the investors who bought their horseshit CDOs by betting against its own crappy product, then it turned around and hosed the taxpayer by making him payoff those same bets.

And once again, while the world was crashing down all around the bank, Goldman made sure it was doing just fine in the compensation department. In 2006, the firm's payroll jumped to \$16.5 billion - an average of \$622,000 per employee. As a Goldman spokesman explained, "We work very hard here."

But the best was yet to come. While the collapse of the housing bubble sent most of the financial world fleeing for the exits, or to jail, Goldman boldly doubled down - and almost single-handedly created yet another bubble, one the world still barely knows the firm had anything to do with.

#### **Bubble #4 - \$4 A Gallon**

By the beginning of 2008, the financial world was in turmoil. Wall Street had spent the past two and a half decades producing one scandal after another, which didn't leave much to sell that wasn't tainted. The terms junk bond, IPO, subprime mortgage and other once-hot financial fare were now firmly associated in the public's mind with scams; the terms credit swaps and CDOs were about to join them. The credit markets were in crisis, and the mantra that had sustained the fantasy economy throughout the Bush years - the notion that housing prices never go down - was now a fully exploded myth, leaving the Street clamoring for a new bullshit paradigm to sling.

Where to go? With the public reluctant to put money in anything that felt like a paper investment, the Street quietly moved the casino to the physical-commodities market - stuff you could touch: corn, coffee, cocoa, wheat and, above all, energy commodities, especially oil. In conjunction with a decline in the dollar, the credit crunch and the housing crash caused a "flight to commodities." Oil futures in particular skyrocketed, as the price of a single barrel went from around \$60 in the middle of 2007 to a high of \$147 in the summer of 2008.

That summer, as the presidential campaign heated up, the accepted explanation for why gasoline had hit \$4.11 a gallon was that there was a problem with the world oil supply. In a classic example of how *Republicans* and *Democrats* respond to crises by engaging in fierce exchanges of moronic irrelevancies, John McCain insisted that ending the moratorium on offshore drilling would be 'very helpful in the short term', while Barack Obama in typical liberal-arts yuppie style argued that federal investment in hybrid cars was the way out.

#### **Goldman Turned A Sleepy Oil Market Into A Giant Betting Parlor - Spiking Prices At The Pump.**

But it was all a lie. While the global supply of oil will eventually dry up, the short-term flow has actually been increasing. In the six months before prices spiked, according to the *US Energy Information Administration*, the world oil supply rose from 85.24 million barrels a day to 85.72 million. Over the same period, world oil demand dropped from 86.82 million barrels a day to 86.07 million. Not only was the short-term supply of oil rising, the demand for it was falling - which, in classic economic terms, should have brought prices at the pump down.

So what caused the huge spike in oil prices? Take a wild guess. Obviously Goldman had help - there were other players in the physical-commodities market - but the root cause had almost everything to do with the behavior of a few powerful actors determined to turn the once-solid market into a speculative casino. Goldman did it by persuading pension funds and other large institutional investors to invest in oil futures - agreeing to buy oil at a certain price on a fixed date. The push transformed oil from a physical commodity, rigidly subject to supply and demand, into something to bet on, like a stock. Between 2003 and 2008, the amount of speculative money in commodities grew from \$13 billion to \$317 billion, an increase of 2,300 percent. By 2008, a barrel of oil was traded 27 times, on average, before it was actually delivered and consumed.

As is so often the case, there had been a Depression-era law in place designed specifically to prevent this sort of thing. The commodities market was designed in large part to help farmers: A grower concerned about future price drops could enter into a contract to sell his corn at a certain price for delivery later on, which made him worry less about building up stores of his crop. When no one was buying corn, the farmer could sell to a middleman known as a “traditional speculator,” who would store the grain and sell it later, when demand returned. That way, someone was always there to buy from the farmer, even when the market temporarily had no need for his crops.

In 1936, however, Congress recognized that there should never be more speculators in the market than real producers and consumers. If that happened, prices would be affected by something other than supply and demand, and price manipulations would ensue. A new law empowered the *Commodity Futures Trading Commission* - the very same body that would later try and fail to regulate credit swaps - to place limits on speculative trades in commodities. As a result of the *CFTC*'s oversight, peace and harmony reigned in the commodities markets for more than 50 years.

All that changed in 1991 when, unbeknownst to almost everyone in the world, a Goldman-owned commodities-trading subsidiary called *J. Aron* wrote to the *CFTC* and made an unusual argument. Farmers with big stores of corn, Goldman argued, weren't the only ones who needed to hedge their risk against future price drops - Wall Street dealers who made big bets on oil prices also needed to hedge their risk, because, well, they stood to lose a lot too.

This was complete and utter crap - the 1936 law, remember, was specifically designed to maintain distinctions between people who were buying and selling real tangible stuff and people who were trading in paper alone. But the *CFTC*, amazingly, bought Goldman's argument. It issued the bank a free pass, called the “Bona Fide Hedging” exemption, allowing Goldman's subsidiary to call itself a physical hedger and escape virtually all limits placed on speculators. In the years that followed, the commission would quietly issue 14 similar exemptions to other companies.

Now Goldman and other banks were free to drive more investors into the commodities markets, enabling speculators to place increasingly big bets. That 1991 letter from Goldman more or less directly led to the oil bubble in 2008, when the number of speculators in the market - driven there by fear of the falling dollar and the housing crash - finally overwhelmed the real physical suppliers and consumers. By 2008, at least three quarters of the activity on the commodity exchanges was speculative, according to a congressional staffer who studied the numbers - and that's likely a conservative estimate. By the middle of last summer, despite rising supply and a drop in demand, we were paying \$4 a gallon every time we pulled up to the pump.

What is even more amazing is that the letter to Goldman, along with most of the other trading exemptions, was handed out more or less in secret. “I was the head of the division of trading and markets, and Brooksley Born was the chair of the *CFTC*,” says Greenberger, “and neither of us knew this letter was out there.” In fact, the letters only came to light by accident. Last year, a staffer for the *House Energy and Commerce Committee* just happened to be at a briefing when officials from the *CFTC* made an offhand reference to the exemptions.

“I had been invited to a briefing the commission was holding on energy,” the staffer recounts. “And suddenly in the middle of it, they start saying, ‘Yeah, we've been issuing these letters for years now.’ I raised my hand and said, ‘Really? You issued a letter? Can I see it?’ And they were like, ‘Duh, duh.’ So we went back and forth, and finally they said, ‘We have to clear it with Goldman Sachs.’ I'm like, ‘What do you mean, you have to clear it with Goldman Sachs?’”

The *CFTC* cited a rule that prohibited it from releasing any information about a company's current position in the market. But the staffer's request was about a letter that had been issued 17 years earlier. It no longer had anything to do with Goldman's current position. What's more, Section 7 of the 1936 commodities law gives Congress the right to any information it wants from the commission. Still, in a classic example of how complete Goldman's capture of government is, the *CFTC* waited until it got clearance from the bank before it turned the letter over.

Armed with the semi-secret government exemption, Goldman had become the chief designer of a giant commodities betting parlor. Its *Goldman Sachs Commodities Index* - which tracks the prices of 24 major commodities but is overwhelmingly weighted toward oil - became the place where pension funds and insurance companies and other institutional investors could make massive long-term bets on commodity prices. Which was all well and good, except for a couple of things. One was that index speculators are mostly ‘long only’ bettors, who seldom if ever take short positions - meaning they only bet on prices to rise. While this kind of behavior is good for a stock market, it's terrible for commodities, because it continually forces prices upward. “If index speculators took short positions as well as long ones, you'd see them pushing prices both up and down,” says Michael Masters, a hedge-fund manager who has helped expose the role of investment banks in the manipulation of oil prices. “But they only push prices in one direction: up.”

Complicating matters even further was the fact that Goldman itself was cheerleading with all its might for an increase in oil prices. In the beginning of 2008, Arjun Murti, a Goldman analyst, hailed as an ‘oracle of oil’ by The

*New York Times*, predicted a “super spike” in oil prices, forecasting a rise to \$200 a barrel. At the time Goldman was heavily invested in oil through its commodities-trading subsidiary, *J. Aron*; it also owned a stake in a major oil refinery in Kansas, where it warehoused the crude it bought and sold. Even though the supply of oil was keeping pace with demand, Murti continually warned of disruptions to the world oil supply, going so far as to broadcast the fact that he owned two hybrid cars. High prices, the bank insisted, were somehow the fault of the piggish American consumer; in 2005, Goldman analysts insisted that we wouldn’t know when oil prices would fall until we knew “when American consumers will stop buying gas-guzzling sport utility vehicles and instead seek fuel-efficient alternatives.”

But it wasn’t the consumption of real oil that was driving up prices - it was the trade in paper oil. By the summer of 2008, in fact, commodities speculators had bought and stockpiled enough oil futures to fill 1.1 billion barrels of crude, which meant that speculators owned more future oil on paper than there was real, physical oil stored in all of the country’s commercial storage tanks and the *Strategic Petroleum Reserve* combined. It was a repeat of both the Internet craze and the housing bubble, when Wall Street jacked up present-day profits by selling suckers shares of a fictional fantasy future of endlessly rising prices.

In what was by now a painfully familiar pattern, the oil-commodities melon hit the pavement hard in the summer of 2008, causing a massive loss of wealth; crude prices plunged from \$147 to \$33. Once again the big losers were ordinary people. The pensioners whose funds invested in this crap got massacred: CalPERS, the California Public Employees’ Retirement System, had \$1.1 billion in commodities when the crash came. And the damage didn’t just come from oil. Soaring food prices driven by the commodities bubble led to catastrophes across the planet, forcing an estimated 100 million people into hunger and sparking food riots throughout the Third World.

Now oil prices are rising again: They shot up 20 percent in the month of May and have nearly doubled so far this year. Once again, the problem is not supply or demand. “The highest supply of oil in the last 20 years is now,” says Rep. Bart Stupak, a Democrat from Michigan who serves on the House energy committee. “Demand is at a 10-year low. And yet prices are up.”

Asked why politicians continue to harp on things like drilling or hybrid cars, when supply and demand have nothing to do with the high prices, Stupak shakes his head. “I think they just don’t understand the problem very well,” he says. “You can’t explain it in 30 seconds, so politicians ignore it.”

#### **Bubble #5 - Rigging The Bailout**

After the oil bubble collapsed last fall, there was no new bubble to keep things humming - this time, the money seems to be really gone, like worldwide-depression gone. So the financial safari has moved elsewhere, and the big game in the hunt has become the only remaining pool of dumb, unguarded capital left to feed upon: taxpayer money. Here, in the biggest bailout in history, is where Goldman Sachs really started to flex its muscle.

It began in September of last year, when then-*Treasury Secretary* Paulson made a momentous series of decisions. Although he had already engineered a rescue of *Bear Stearns* a few months before and helped bail out quasi-private lenders *Fannie Mae* and *Freddie Mac*, Paulson elected to let *Lehman Brothers* - one of Goldman’s last real competitors - collapse without intervention. (“Goldman’s superhero status was left intact,” says market analyst Eric Salzman, “and an investment-banking competitor, *Lehman*, goes away.”) The very next day, Paulson greenlighted a massive, \$85 billion bailout of *AIG*, which promptly turned around and repaid \$13 billion it owed to Goldman. Thanks to the rescue effort, the bank ended up getting paid in full for its bad bets: By contrast, retired auto workers awaiting the *Chrysler* bailout will be lucky to receive 50 cents for every dollar they are owed.

Immediately after the *AIG* bailout, Paulson announced his federal bailout for the financial industry, a \$700 billion plan called the *Troubled Asset Relief Program*, and put a heretofore unknown 35-year-old Goldman banker named Neel Kashkari in charge of administering the funds. In order to qualify for bailout monies, Goldman announced that it would convert from an investment bank to a bank holding company, a move that allows it access not only to \$10 billion in *TARP* funds, but to a whole galaxy of less conspicuous, publicly backed funding - most notably, lending from the discount window of the *Federal Reserve*. By the end of March, the *Fed* will have lent or guaranteed at least \$8.7 trillion under a series of new bailout programs - and thanks to an obscure law allowing the *Fed* to block most congressional audits, both the amounts and the recipients of the monies remain almost entirely secret.

Converting to a bank-holding company has other benefits as well: Goldman’s primary supervisor is now the *New York Fed*, whose chairman at the time of its announcement was Stephen Friedman, a former co-chairman of Goldman Sachs. Friedman was technically in violation of *Federal Reserve* policy by remaining on the board of Goldman even as he was supposedly regulating the bank; in order to rectify the problem, he applied for, and got, a conflict-of-interest waiver from the government. Friedman was also supposed to divest himself of his Goldman stock after Goldman became a bank-holding company, but thanks to the waiver, he was allowed to go out and buy 52,000 additional shares in his old bank, leaving him \$3 million richer. Friedman stepped down in May, but the man

now in charge of supervising Goldman - *New York Fed* president William Dudley - is yet another former Goldmanite.

The collective message of all this - the *AIG* bailout, the swift approval for its bank-holding conversion, the *TARP* funds - is that when it comes to Goldman Sachs, there isn't a free market at all. The government might let other players on the market die, but it simply will not allow Goldman to fail under any circumstances. Its edge in the market has suddenly become an open declaration of supreme privilege. "In the past it was an implicit advantage," says Simon Johnson, an economics professor at *MIT* and former official at the *International Monetary Fund*, who compares the bailout to the crony capitalism he has seen in Third World countries. "Now it's more of an explicit advantage."

Once the bailouts were in place, Goldman went right back to business as usual, dreaming up impossibly convoluted schemes to pick the American carcass clean of its loose capital. One of its first moves in the post-bailout era was to quietly push forward the calendar it uses to report its earnings, essentially wiping December 2008 - with its \$1.3 billion in pretax losses - off the books. At the same time, the bank announced a highly suspicious \$1.8 billion profit for the first quarter of 2009 - which apparently included a large chunk of money funneled to it by taxpayers via the *AIG* bailout. "They cooked those first-quarter results six ways from Sunday," says one hedge-fund manager. "They hid the losses in the orphan month and called the bailout money profit."

Two more numbers stand out from that stunning first-quarter turnaround. The bank paid out an astonishing \$4.7 billion in bonuses and compensation in the first three months of this year, an 18 percent increase over the first quarter of 2008. It also raised \$5 billion by issuing new shares almost immediately after releasing its first-quarter results. Taken together, the numbers show that Goldman essentially borrowed a \$5 billion salary payout for its executives in the middle of the global economic crisis it helped cause, using half-baked accounting to reel in investors, just months after receiving billions in a taxpayer bailout.

Even more amazing, Goldman did it all right before the government announced the results of its new "stress test" for banks seeking to repay *TARP* money - suggesting that Goldman knew exactly what was coming. The government was trying to carefully orchestrate the repayments in an effort to prevent further trouble at banks that couldn't pay back the money right away. But Goldman blew off those concerns, brazenly flaunting its insider status. "They seemed to know everything that they needed to do before the stress test came out, unlike everyone else, who had to wait until after," says Michael Hecht, a managing director of *JMP Securities*. "The government came out and said, 'To pay back *TARP*, you have to issue debt of at least five years that is not insured by *FDIC* - which Goldman Sachs had already done, a week or two before."

And here's the real punch line. After playing an intimate role in four historic bubble catastrophes, after helping \$5 trillion in wealth disappear from the *NASDAQ*, after pawning off thousands of toxic mortgages on pensioners and cities, after helping to drive the price of gas up to \$4 a gallon and to push 100 million people around the world into hunger, after securing tens of billions of taxpayer dollars through a series of bailouts overseen by its former CEO, what did Goldman Sachs give back to the people of the United States in 2008? Fourteen million dollars.

That is what the firm paid in taxes in 2008, an effective tax rate of exactly one, read it, one percent. The bank paid out \$10 billion in compensation and benefits that same year and made a profit of more than \$2 billion - yet it paid the Treasury less than a third of what it forked over to CEO Lloyd Blankfein, who made \$42.9 million last year.

How is this possible? According to Goldman's annual report, the low taxes are due in large part to changes in the bank's 'geographic earnings mix'. In other words, the bank moved its money around so that most of its earnings took place in foreign countries with low tax rates. Thanks to our completely hosed corporate tax system, companies like Goldman can ship their revenues offshore and defer taxes on those revenues indefinitely, even while they claim deductions upfront on that same untaxed income. This is why any corporation with an at least occasionally sober accountant can usually find a way to zero out its taxes. A *GAO* report, in fact, found that between 1998 and 2005, roughly two-thirds of all corporations operating in the US paid no taxes at all.

This should be a pitchfork-level outrage - but somehow, when Goldman released its post-bailout tax profile, hardly anyone said a word. One of the few to remark on the obscenity was Rep. Lloyd Doggett, a Democrat from Texas who serves on the *House Ways and Means Committee*. "With the right hand out begging for bailout money," he said, "the left is hiding it offshore."

#### **Bubble #6 - Global Warming**

Fast-Forward to today. It's early June in Washington, DC, Barack Obama, a popular young politician whose leading private campaign donor was an investment bank called Goldman Sachs - its employees paid some \$981,000 to his campaign - sits in the White House. Having seamlessly navigated the political minefield of the bailout era, Goldman is once again back to its old business, scouting out loopholes in a new government-created market with the aid of a new set of alumni occupying key government jobs.

**As Envisioned By Goldman Sachs  
The Fight to Stop  
Global Warming  
will become  
A 'Carbon Market' Worth  
\$1 Trillion a year**

Gone are Hank Paulson and Neel Kashkari; in their place are Treasury chief of staff Mark Patterson and *CFTC* chief Gary Gensler, both former Goldmanites. (Gensler was the firm's co-head of finance). And instead of credit derivatives or oil futures or mortgage-backed CDOs, the new game in town, the next bubble, is in carbon credits - a booming trillion-dollar market that barely even exists yet, but will if the *Democratic Party* that it gave \$4,452,585 to in the last election manages to push into existence a groundbreaking new commodities bubble, disguised as an 'environmental plan', called cap-and-trade.

The new carbon-credit market is a virtual repeat of the commodities-market casino that's been kind to Goldman, except it has one delicious new wrinkle: If the plan goes forward as expected, the rise in prices will be government-mandated. Goldman won't even have to rig the game. It will be rigged in advance.

Here's how it works: If the bill passes; there will be limits for coal plants, utilities, natural-gas distributors and numerous other industries on the amount of carbon emissions (a.k.a. greenhouse gases) they can produce per year. If the companies go over their allotment, they will be able to buy "allocations" or credits from other companies that have managed to produce fewer emissions. President Obama conservatively estimates that about \$646 billions worth of carbon credits will be auctioned in the first seven years; one of his top economic aides speculates that the real number might be twice or even three times that amount.

The feature of this plan that has special appeal to speculators is that the "cap" on carbon will be continually lowered by the government, which means that carbon credits will become more and more scarce with each passing year. Which means that this is a brand-new commodities market where the main commodity to be traded is guaranteed to rise in price over time. The volume of this new market will be upwards of a trillion dollars annually; for comparison's sake, the annual combined revenues of all electricity suppliers in the US total \$320 billion.

Goldman wants this bill. The plan is (1) to get in on the ground floor of paradigm-shifting legislation, (2) make sure that they're the profit-making slice of that paradigm and (3) make sure the slice is a big slice. Goldman started pushing hard for cap-and-trade long ago, but things really ramped up last year when the firm spent \$3.5 million to lobby climate issues. (One of their lobbyists at the time was none other than Patterson, now Treasury chief of staff.) Back in 2005, when Hank Paulson was chief of Goldman, he personally helped author the bank's environmental policy, a document that contains some surprising elements for a firm that in all other areas has been consistently opposed to any sort of government regulation. Paulson's report argued that "voluntary action alone cannot solve the climate-change problem." A few years later, the bank's carbon chief, Ken Newcombe, insisted that cap-and-trade alone won't be enough to fix the climate problem and called for further public investments in research and development. Which is convenient, considering that 'Goldman made early investments in wind power (it bought a subsidiary called *Horizon Wind Energy*), renewable diesel (it is an investor in a firm called *Changing World Technologies*) and solar power (it partnered with *BP Solar*), exactly the kind of deals that will prosper if the government forces energy producers to use cleaner energy. As Paulson said at the time, "We're not making those investments to lose money."

The bank owns a 10 percent stake in the *Chicago Climate Exchange*, where the carbon credits will be traded. Moreover, Goldman owns a minority stake in *Blue Source LLC*, a Utah-based firm that sells carbon credits of the type that will be in great demand if the bill passes. Nobel Prize winner Al Gore, who is intimately involved with the planning of cap-and-trade, started up a company called *Generation Investment Management* with three former bigwigs from *Goldman Sachs Asset Management*, David Blood, Mark Ferguson and Peter Harris. Their business? Investing in carbon offsets. There's also a \$500 million *Green Growth Fund* set up by a Goldmanite to invest in green-tech...the list goes on and on. Goldman is ahead of the headlines again, just waiting for someone to make it rain in the right spot. Will this market be bigger than the energy-futures market?

"Oh, it'll dwarf it," says a former staffer on the *House Energy Committee*.

Well, you might say, who cares? If cap-and-trade succeeds, won't we all be saved from the catastrophe of global warming? Maybe - but cap-and-trade, as envisioned by Goldman, is really just a carbon tax structured so that private interests collect the revenues. Instead of simply imposing a fixed government levy on carbon pollution and forcing unclean energy producers to pay for the mess they make, cap-and trade will allow a small tribe of greedy-as-hell

Wall Street swine to turn yet another commodities market into a private tax-collection scheme. This is worse than the bailout: It allows the bank to seize taxpayer money before it's even collected.

"If it's going to be a tax, I would prefer that Washington set the tax and collect it," says Michael Masters, the hedge fund director who spoke out against oil-futures speculation. "But we're saying that Wall Street can set the tax, and Wall Street can collect the tax. That's the last thing in the world I want. It's just asinine."

Cap-and-trade is going to happen. Or, if it doesn't, something like it will. The moral is the same as for all the other bubbles that Goldman helped create, from 1929 to 2009. In almost every case, the very same bank that behaved recklessly for years, weighing down the system with toxic loans and predatory debt, and accomplishing nothing but massive bonuses for a few bosses, has been rewarded with mountains of virtually free money and government guarantees - while the actual victims in this mess, ordinary taxpayers, are the ones paying for it.

It's not always easy to accept the reality of what we now routinely allow these people to get away with; there's a kind of collective denial that kicks in when a country goes through what America has gone through lately, when a people lose as much prestige and status as we have in the past few years. You can't really register the fact that you're no longer a citizen of a thriving first-world democracy that you're no longer above getting robbed in broad daylight, because like an amputee, you can still sort of feel things that are no longer there.

But this is it. This is the world we live in now. And in this world, some of us have to play by the rules, while others get a note from the principal excusing them from homework till the end of time, plus 10 billion free dollars in a paper bag to buy lunch. It's a gangster state, running on gangster economics, and even prices can't be trusted anymore; there are hidden taxes in every buck you pay. And maybe we can't stop it, but we should at least know where it's all going.

#### Some of the Goldman Sachs Boys

*Just one big happy family...with their fingers in the till*

[http://williamshepherd.blog.co.uk/2006/10/18/monday\\_16th\\_october~1234003/](http://williamshepherd.blog.co.uk/2006/10/18/monday_16th_october~1234003/)

From left to right: **Robert Zoellick**, former US Trade Representative and Deputy US Secretary, former international advisor at Goldman Sachs, now international Vice-chairman and Chairman of its international advisory arm; **Robert Steel**, new US Treasury Under-Secretary, previously Goldman Sachs; **Robert Rubin**, joined Goldman Sachs in 1966, served as co-chairman and co-senior partner with Stephen Friedman 1990-92, Clinton's Treasury Secretary 1995-99; **Josh Bolten**, White House Chief of Staff, former Goldman Sachs executive director of legal and government affairs in London 1994-99; **Henry Paulson**, US Treasury Secretary previously Goldman Sachs chairman and chief executive; **Stephen Friedman**, former White House chief economist, previously Goldman Sachs co-chairman 1990-92 and chairman and senior partner 1992-94.

Goldman Sachs is an investment bank...not a commercial bank...so it is not required to report its derivatives position to the US Office of the Comptroller of the Currency. This means that unlike JPMorganChase it is hard to know the derivatives exposures at Goldman Sachs. But there are suspicions that it may be of JPMorgan Chase proportions. Before Cantor Fitzgerald disappeared under the rubble of the World Trade Centre on 9/11 it might have been possible to shrug this off. But there are persistent rumours that Goldman Sachs is in deep, deep trouble because of Derivatives Trading Losses over the past two years as the gold price has broken out. This quote from Sherman H. Skolnickat on the Indymedia website is typical: 'Goldman Sachs is reportedly in a sinking boat with Germany's huge financial ship Deutsche Bank and the worldwide bank octopus Bank of America. According to some bond and gold experts the Federal Reserve had to come up with 600 billion dollars to rescue this trio of bust financial players.'

Goldman Sachs has instructed Wall Street law firm Chadbourne & Parke to pursue blogger Mike Morgan, warning him in a recent cease-and-desist letter that he may face legal action if he does not close down his website. Florida-based Mr Morgan began a blog entitled "Facts about Goldman Sachs" - the web address for which is [goldmansachs666.com](http://goldmansachs666.com) - just a few weeks ago.

### UK Government Energy Policy 2006

*The Prime Minister's Address to the Labour Party Conference by the Right Honourable Tony Blair included a section on the UK Government's Energy Policy. The Times condensed what Mr Blair had to say to the Party Faithful into 180 words..*

'Ten years ago energy wasn't on the agenda. Ten years ago I parked the issue of nuclear power. Today I believe without it we are going to face an energy crisis and we can't let that happen.

Global warming is the greatest long-term threat to our planet's environment. Scarce energy resources mean rising prices and will threaten our country's economy. In 15 years we will go from 86 percent self-sufficient in oil and gas to 80 percent imported. We need therefore the most radical overhaul of energy policy since the war.

We will increase the amount of energy from renewable sources fivefold; ensure every major business in the country has responsibility for greenhouse gas reduction; treble investment in clean technology including clean coal and make sure every new home is at least 40 percent more energy efficient.

We will meet our Kyoto targets by double the amount and we will take the necessary measures step by step to meet one of the most ambitious targets on the environment ever set anywhere in the world - a 60% reduction in emissions by 2050.'

### An English Energy Policy for a New Century by William Shepherd

*The Energy Policy section of the Prime Minister's Address to the Labour Party Conference was rewritten by William Shepherd and condensed into 180 words by the Cliff's Edge Signalling Company.*

Ten years ago it was blindingly obvious that energy self sufficiency was the right energy policy goal. Ten years ago it was blindingly obvious that nuclear power was a dead-end technology. Nothing has changed.

Global warming and the greenhouse effect are fantasy not fact. To imagine Governments can stabilize the *Earth's* atmosphere is arrogant beyond belief. Human beings cannot control the climate and must stop meddling with it. There is no energy shortage. The sun takes 45 minutes to provide all the energy we use in one year.

We will outlaw the use and development of climate weapons immediately. We will withdraw from the *Kyoto Treaty* immediately. We will decommission all nuclear power stations immediately. We will stop wasting electricity on space heating. We will adopt zero tolerance and polluter pays policies for emission of all substances into the landscape and the atmosphere.

We will establish a Lord Lieutenant's Department with Cabinet status to direct the dismantling of the country's national piped energy grids. Prince Charles will head the department, negotiate county disconnection dates, issue the money and provide the people.
